The Access Solution for Business Telephone Systems

Overview

Compusult's TeleTalk system provides access to telephone console indicator and message display information for blind and visually impaired users.

TeleTalk is a compact, unobtrusive system that captures data from a telephone system and converts call-related data to equivalent speech and large, high-contrast display output.

There are TeleTalk systems specifically designed for various models of telephone consoles. Let us know your requirements.

The TeleTalk system is:

- **Reliable** - The electronics and software employ proven hardware and software technology.
- **Easy to install & maintain** - TeleTalk can be fully operational in two hours. Some models are user installable.
- **Transportable** - It is a light, compact system that can be easily relocated when equipment is moved or replaced.
- **Broad-based** - TeleTalk is available in multiple configurations for a variety of telephone consoles. We also have other assistive technology products where TeleTalk is not an option. Please contact us to discuss your specific needs.

The original TeleTalk system was developed for Mary Susan Orester at the Nebraska Department of Revenue in cooperation with the Nebraska Commission for the Blind and Visually Impaired.

Configurations

The TeleTalk system is available in various configurations, including:

TeleTalk hardware & software.

- Uses electronics hardware to capture data from the telephone console and computer software to provide speech output of telephone indicator & display information.

TeleTalk electronics hardware.

- A stand-alone system that uses electronics hardware to capture data from the telephone console and provide speech output of telephone indicator & display information.

TeleTalk hardware and computer.

- Uses electronics hardware to capture data from the telephone console and a miniature computer system to provide speech output of telephone indicator & display information.

TeleTalk solutions are available for several models of Nortel and many other telephone consoles.

System Requirements

The TeleTalk software will run on computer systems with the following minimum configuration:

- Microsoft Windows 98, ME, 2000 or XP
- Pentium 4 processor
- 128 MB of available RAM
- 50 MB of available hard disk drive space
- One RS-232 serial (COM) or USB port
- Multi-channel sound card
- Monitor capable of 800 x 600 resolution
- CD-ROM drive
